#### Objective Biology Paper Group - II Gujranwala Board 2024 (To be filled in by the candidate) Maximum Marks: 17 Roll No. Biology Real pakcity.org 224-1st Annual - (Inter Part-II) Time Allowed: 20 Minutes PAPER - II (Objective Type) Group - II PAPER CODE = 8468Note: You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill that circle in front of that question number, Use marker or when to fill the circles. Cutting or filling two or more circles will result in zero mark in that question. 1. The methyl containing nitrogenous base is: (A) uracil (B) cytosine (C) thymine (D) adenine 2. Fresh water ecosystem covers less than: (A) 2% (B) 3% (C) 1% (D) 97% 3. Tapeworm is primary parasite of: (A) octopus (C) cattle (B) pig (D) man • 4. Rickets is caused by the deficiency of: (A) vitamin D (B) vitamin C (C) vitamin A (D) vitamin B 5. The negative physiological changes in our body are called: (A) regeneration (B) abnormalities (C) degeneration (D) aging 6. The inexhaustible resource of energy on earth is: (A) coal energy (B) solar energy (C) fossil fuel (D) natural gas energy 7. Archeobacteria tolerate temperature about: (C) 80 °C (A) 100 °C (B) 120 °C ● (D) 40 °C 8. The homologous chromosomes get separated during: (B) Anaphase - I (A) Prophase - I (D) Metaphase - I (C) Telophase - I 9. MODY starts before: (A) 50 years (B) 30 years • (C) 40 years (D) 25 years 10. Sarcoplasmic Reticulum are devoid of: (A) Lysosomes (B) chloroplast (c) peroxisomes (D) Ribosomes 11. The effective drug for Parkinson's disease is: (A) Nicotine (B) AZT (C) L.dopa (D) GDNF 12. Apical dominance is caused by: (B) gibberellins (A) Auxins (C) ethene (D) cytokinins 13. Which one of the given is non-sense codon? (A) UAA (B) UCC (C) UCG (D) UCU 14. The commonly used restriction enzyme is: (A) EcoR1 (B) Bam H1 (C) pBR 322 (D) pSC 10 15. Excretory structures present in cockroach is: (A) Nephridia (B) Malpighian tubules (C) Contractile Vacuole (D) Flame cells 16. Cystic Fibrosis patients lack gene that code for transmembrane carrier of: (A) Chloride Ions (B) Carbonate Ions (C) Bromide lons (D) Sulphate lons 17. Which one is Parthenogenic fruit? (A) Mango (B) Pineapple (C) Peach (D) Apple

#### Subjective Biology Paper Group - II Gujranwala Board 2024 ( To be filled in by the candidate) **Biology** 224-1st Annual - (Inter Part-II) Time Allowed: 2.40 Hours PAPER - II (Essay Type) Group - II Maximum Marks: 68 **SECTION - I** pakcity.org & 2. Write short answers to any eight (8) questions: $8 \times 2 = 16$ (i) Account one each main adaptation in plants to high and low temperatures. (ii) Why does filtration takes place only at glomeruli part of Nephron and nowhere else? (iii) Mention two metabolic altered states that generally (70%) cause kidney stone formation. (iv) What are unguligrade? Give example (v) Name the unpaired bones of cranium. (vi) What is pulvinus? Write down its role in turgor movements. (vii) Define Haploid parthenogenesis. Give example. (viii) Name disease caused by Treponema pullidum. Also write down its two symptoms. (ix) Define soil. Mention its one role and one problem. (x) What are plankton? Give their two types. (xi) What is limnetic zone? Mention its life. (xii) What is meant by Hydroelectric power? write down its advantages. 3. Write short answers to any eight (8) questions: $8 \times 2 = 16$ (i) Is it possible to eliminate biorhythms in an organism? (ii) Describe exocrine and endocrine function of pancreas. (iii) What happens when dopamine production is stopped in brain? (iv) Why AB blood group is universal recipient (v) What is pleiotropy? Give one example. (vi) What is vortex mixing technique? (vii) What is testicular feminization syndrome? (viii) How familial hypercholesterolemia is treated using gene therapy? (ix) Why plasmids are naturally present in bacteria? (x) Compare ecology with autecology. (xi) What is the role of bacteria in leguminous plants? (xii) Describe the importance of food chain in an ecosystem. 4. Write short answers to any six (6) questions: $6 \times 2 = 12$ (i) How is primitive streak formed? (ii) What do you know about intercalary meristem? (iii) Name and draw the (P-O-C) bond responsible for the stability of nucleic acid molecule. (iv) What was the effect of x-rays on neurospora spores in Beadle and Tatum experiment? (v) What changes occur in a cell during apoptosis? (vi) Why does DNA thread coils every 200 nucleotides around histone protein molecules? (vii) What are functions of mitotic apparatus? (viii)State theory of special creation. (ix) What do you know about fixed alleles? **SECTION - II** Note: Attempt any three (3) questions: $8 \times 3 = 24$ 5. (a) Explain through a diagram the thermostat function of hypothalamus and feedback mechanism in human thermoregulation. **(b)** Explain the Nacrosis and apoptosis in development and growth. 6. (a) Describe sliding filament model. What does it explain? **(b)** What do you know about grazing? 7. (a) Describe nervous disorders. **(b)** What ideas support the inheritance of acquired characters? 8. (a) Write a note on reproduction system of human female. (b) Define and explain law of independent assortment. 9. (a) What does embryonic induction mean? Write down the experiments of Spemann and Mangold to demonstrate the phenomenon.

(b) What are restrictions endonucleases? Elaborate their importance for bacteria and Recombinant DNA

	Objective	<b>Biology Paper Group</b>	- I Gujranwala Bo	oard 2024
Ro	ll No ( To be fill	led in by the candidate)	1	Maximum Marks : 17
Bio	ology 🤏 pakcity.org 🐉	224-1 <sup>st</sup> Annual - (In	ter Part-II)	Γime Allowed : 20 Minutes
PA	PER - II (Objective Type)	Group - I	1	PAPER CODE = 8467
Not	e: You have four choices for	each objective type q	uestion as A, B,	C and D. The choice which you
				Use marker or when to fill the
	circles. Cutting or filling tw	o or more circles will	result in zero ma	rk in that question.
1.	Which of the following is not of			
	(A) fibrinogen formation (B)			
2.	According to endosymbiont h			
	. , .	spirochete	(C) aerobic bact	eria (D) mitochondria 🔵
3.	Fertilizer and insecticides are			
		-	(C) increase so	il pollution (D) both (A) and (C)
4.	Which of the following is not to		(D) (I   1   1   1   1   1   1   1   1   1	
	(A) Neisseria may cause eye ii			caused by a spirochete
	(C) Treponema pallidum can		(D) Epicotyl gro	owth is damaged by red light
5.	What is not true about eutrop	inication?	(D) doubtion of	
	(A) rise in phosphorus fishes		(B) depletion of	
6	(C) rise in oxygen level	nna atly, matahad?	(D) death of sm	all fishes
6.	Which of the following is inco (A) ichthyosis ocular ↔ ocular		(D) Hymanhaen	hatemia ↔ Hemophilia A
	(C) Fragile X-syndrome $\leftrightarrow$ Re			syndrome ↔ hemophilia-B
7.	Which one is the wrong pair a		(D) lech-Nyhan	a syntatome V hemophina-b
,.	(A) sickle cell anemia $\leftrightarrow \beta$ -ch		(R) nenicillium	↔ one chromosme
	(C) 7 methyle GTP $\leftrightarrow$ 5' end of	_	(D) UGA trpy	
8.	The second secon			ele, which of the following is true
	about him, if he marries a won		1	,
		△ > <		nt pass the recessive allele sons
	(C) all of his sons exhibit the t			s the recessive allele to daughters
9.	About% of energy is lost	7. 11 1		
	(A) $50 - 60$ (B) 6	50 - 70	(C) $70 - 90$	(D) 80 − 90 ●
10.	Which of the following is wro			
	(A) adrenalin e releases gluco	se from liver	(B) non- adrena	aline releases glucose from liver
	(C) sympathetic system is rein	nforced by epinephrin	e (D) pupil dilate	s by parasympathetic system
11.	At rest, the binding sites on ea		ecovered by:	
			(C) cross bridges	
12.	The part of brain that controls	TO DANCE	IIV.OIU	
	(A) midbrain (B) p		(C) medulla	(D) cerebellum
13.	44-autosome plus 2-X-chrome			
	(A) Down's syndrome (B) T		(C) jacob syndroi	ne (D) Normal female
14.	What is benefit of using a retr	_	2.5	
	(A) it is not able to enter the c			genes into the host chromosome
1 [	(C) it eliminates the unnecess	ary steps (D) both (	B) and (C)	
15.	Indicate true statement:	a abain bamadabir	o io mothionino	
	<ul><li>(A) First amino acid in Alfa</li><li>(B) inhibitory effect of apical</li></ul>			
				re negatively charged proteins
16	Indicate the false statement:	mme m mitocilonul la	(D) mswites at	e negatively charged proteins
10.	(A) a gain is caused by negative	ve nhysiological chang	res 👛	
	(B) inhibitory effect of apical		2.)	
				avors division of cells in plants
17.	Skeletal muscles and cardiac			-
N 16 1 15		B) striated	(C) branched	
			( )	319-(IV)-1 <sup>st</sup> A 424-25000

#### Subjective Biology Paper Group - I Gujranwala Board 2024 \_\_ ( To be filled in by the candidate) Roll No. 224-1st Annual - (Inter Part-II) **Biology** Time Allowed: 2.40 Hours PAPER - II (Essay Type) Group - I Maximum Marks: 68 **SECTION - I** pakcity.org 2. Write short answers to any eight (8) questions: $8 \times 2 = 16$ Write down different methods to remove kidney stones (ii) What is blubber? in which type of animals, it is found? (iii) Why some fishes retain trimethylamine oxide in their bodies? (iv) Describes various types of sclerenchyma cells. (v) What is the main disadvantage of exoskeleton? How insects deal with problem? (vi) Write down characteristics of cardiac muscles. (vii) What are day natural plants? Give two examples. (viii) What is follicle? How it is related to FSH? (ix) Describes some characteristics of profundal zone. (x) Elaborate the layering characteristic grassland ecosystem. (xi) How the use of hydroelectric power is better than use of fossil fuels? (xii) What do you mean by the term afforestation? 3. Write short answers to any eight (8) questions: $8 \times 2 = 16$ (i) How can you differentiate between reflex action and reflex are? (ii) What are Pacinian sensory neuron. (iii) Draw and label sensory neuron. (iv) Why did Mendel devise a test cross? (v) Workout all possible types of gametes from the individual having genotype "AaBbCc". (vi) Why blood group "O" is called as universal donor? (vii) How can you get a gone of interest? (viii) What is probe? Give its use. (ix) Which technique is used to produce a haploid plant in tissue culture? (x) How nitrification differs from denitrification? (xi) What are Abiotic components of an ecosystem? (xii) Differentiate between Autecology and synecology 4. Write short answers to any six (6) questions: $6 \times 2 = 12$ (i) What are intercalary meristems? Give their role. (ii) How CO<sub>2</sub> affects the growth rate in plants? (iii) Name the three non-sence codons. (iv) Give four differences between DNA and RNA (v) what are point mutations? (vi) What is metastasis? (vii) Difine crossing over Give its importance. (viii) What are vestigial organs? Give two examples. (ix) Name any four species, declared extinct in Pakistan. **SECTION - II** Note: Attempt any three (3) questions: $8 \times 3 = 24$ 5. (a) Write down a comprehensive note on excretion in plants. (b) Define cell cycle. Discuss interphase in detail. 6. (a) What are autonomic movements? Discuss their types **(b)** Explain predation and parasitism in detail. 7. (a) In what way the feedback mechanism takes place to regulate the Hormonal production? **(b)** Describes the phenomena of Green House effect, its cause and impacts. 8. (a) Explain the male reproductive system in human. **(b)** Describe the mechanism of incomplete dominance with an example.

319-(IV)-1stA 424-25000

9. (a) How embryonic induction was proved by Hans spemann and Hidle mangold?

**(b)** Write down a note on gene sequencing.

### Lahore Board-2024-G-2

(To be filled in by the candidate) koll No (Academic Sessions 2020 - 2022 to 2022 - 2024) Time Allowed: 2.40 hours 224-1<sup>st</sup> Annual-(INTER PART – II) **BIOLOGY** Maximum Marks: 68 GROUP - II PAPER – II (Essay Type) SECTION - I 16 2. Write short answers to any EIGHT (8) questions : → pakcity.org (i) What do hypotonic and hypertonic environment mean for a cell? (ii) How cartilaginous fishes show osmoregulatory activity to maintain internal osmotic state with two ways? (iii) What are xerophytes, write its one adaptation and one example. (iv) Distinguish between the origin and insertion of muscle. (v) List the main parts of axial skeleton. (vi) Why ecdysis is necessary in arthropods? Justify. (vii) Name the causative agent of gonorrhea, also write its two symptoms. (viii) Write the role of oxytocin during birth process. (ix) Define desertification, give its one reason and one effect. (x) Give location and rain fall of temperate deciduous forest in Pakistan. (xi) Name one pathogenic and one nutritional deficiency disease. (xii) Write the source and harmful effects of chlorofluorocarbon. 16 3. Write short answers to any EIGHT (8) questions : (i) Justify, calcitonin is antagonistic to parathormone. (ii) Why nitrogen and magnesium deficiency leads to chlorosis? (iii) Describe two main functions of spinal cord. (iv) What are true breeding traits? (v) Is SRY gene important in females? (vi) How epistasis is different from dominance? (vii) Define anther culture. Write down its one significance. (viii) How plants are made salt tolerant? (ix) Enlist some possible ways to get a gene. (x) Give name of phases of primary succession. (xi) Why over grazing is harmful for a grassland? (xii) Define ecological niche, who proposed this term? 12 4. Write short answers to any SIX (6) questions : (i) How can aging be slowed down? (ii) How does temperature affect plant growth? (iii) What is the reason behind the development of sickle cell anemia? (iv) Define point mutation. Give an example. pakeity (v) Briefly describe the semi-conservative hypothesis of DNA replication. (vi) What is metastasis? (vii) How does cytokinesis occur in plant cell? (viii) How are evolutionary relationships among species reflected regarding DNA and proteins? (ix) What is endosymbiont hypothesis? Give an example. SECTION - II Note: Attempt any THREE questions. 4 5. (a) Explain the excretory products of different animals. (b) What are meiotic errors? Explain Mongolism and Klinefelter's Syndrome. 6. (a) Define joints. How are they classified? Explain different types of joints. 4 4 (b) Describe predation and parasitism and their significance. 4 7. (a) Briefly explain synapse. 4 (b) Discuss endangered species in detail. 4 8. (a) Define photoperiodism. Explain types of plants on its bases. (b) Briefly explain the problem erythroblastosis foetalis faced by certain parents. 9. (a) What are meristems? Explain their types highlighting their location in 4 plant body and their roles. 4 (b) Write down the steps of DNA finger printing. (Analyzing DNA) 229-224-II-(Essay Type)-17000

Biology	(D)	L.K.No. 1467 Paper Code No. 846		
Paper II	(Objective Type)	Inter ( I <sup>st</sup> – A – Exam – 2024 )		
Time :	20 Minutes	inter ( Part - ii )	- pakcity.org	
Marks :	17	Session (2020 – 22) to	(2022 – 24)	

Note: Four choices A, B, C,D to each question are given. Which choice is correct fill that circle in front of that Question No. on the Objective Bubble Sheet. Use Marker or Pen to fill the circles. Cutting or filling two or more circles will result in Zero Mark in that Question.

Q.No.1	One gram of Ammonia require how much water for its removal :
(1)	(A) 300 ml (B) 400 ml (C) 500 ml (D) 600 ml
(2)	Nociceptor produce the Sensation of :
	(A) Pressure (B) Touch (C) Smell (D) Pain
(3)	Number of Pelvic Vertèbrae are :
	(A) 9 (B) 12 (C) 7 (D) 5
(4)	The Living cell of Cartilage are called :
	(A) Cnidocytes (B) Chondrocytes (C) Osteocytes (D) Melanocytes
(5)	Hind Brain Contains Medulla , Pons and:
	(A) Thalamus (B) Cerebellum (C) Hypothalamus (D) Cerebrum
(6)	Genetic Code for Methionine is:
	(A) AUG (B) UAA (C) UAG (D) UGA
(7)	Diploid Parthenogenesis occurs in :
	(A) Aphid (B) Honey Bee (C) Wasp (D) Hydra
(8)	Study of Aging is called:
	(A) Paelontology (B) Serology (C) Teratology (D) Gerontology
(9)	How many different kinds of t.RNA are in Human Cell:
	(A) 54 (B) 45 (C) 20 (D) 50
(10)	The Enzyme which joins two pieces of DNA:
()	
	(A) Helicase (B) DNA Ligase (C) Gyrase (D) Primase
(11)	Cross which is used to find out the Homozygous or Heterozygous nature of Genotype is called :
	(A) Reciprocal Cross (B) Multiple Cross (C) Test Cross (D) Dihybrid Cross
(12)	Mitotic Apparatus is organized during which phase of Mitosis :
,,	
	(A) Prophase (B) Metaphase (C) Anaphase (D) Telophase
(13)	Antibody used for treatment of Genital Herpes is obtained from :
(14)	(A) Rice (B) Wheat (C) Soyabean (D) Corn  Northern Coniferous Forests are also called :
(24)	(A) Savanna (B) Prairies (C) Taiga (D) Tundra
(15)	Which one of following act as Environmental Buffer :
	(A) Forests (B) Desert (C) Oceans (D) Lakes
(16)	Endosymbiont Hypothesis was proposed by :
	(A) Lynn Margulis (B) Wallace (C) Lyell (D) Darwin
(17)	All Food Chains and Food Webs begin with:
	(A) Decomposer Level (B) Primary Consumer Level
L	(C) Secondary Consumer Level (D) Producer Level

Roll No. 1467 - 25000 Inter (Part – II ) Session (2020 – 22 ) to (2022 – 24)

Biology (Subjective) Inter (Ist – A – Exam – 2024 ) Time 2:40 Hours Marks: 68

Note: It is compulsory to attempt any (8-8) Parts each from Q.No. 2, Q.No.3 and attempt any (6) Parts from Q.No.4. Attempt any (3) Questions from Part – II. Write same Question No. and its Part No. as given in the Question Paper.

Ma	ake Diag	ram where necessary. Part - I pakcity.org pakcity.org	44						
Q.No.2	(i)	What is Anhydrobiosis ?							
	(ii)	Draw a labelled diagram of Flame Cell.							
	(iii)	How Kidney Stones are formed in man?							
	(iv)	Write names of the Bones of Pelvic Girdle.							
	(v)	Define Rickets. Give its cause.							
	(vi)	How do Amoeba move?							
	(vii)	Define Seed Dormancy . How it is beneficial for Plants?							
	(viii)								
	(ix)	Enlist dominant plants of Coniferous Alpine and Boreal Forests.							
	(x)	How Humans affect Tundra Ecosystem ?							
	(xi)	How balance in the Nutrient cycle can be upset?							
	(xii)	Acid Rain is Harmful . How?							
2.No.3	(i)	Differentiate between Monohybrids and Dihybrids .							
211 1010	(ii)								
	()	How pattern of Inheritance of X – Linked Dominant Traits is different from that of X – Linked Recessive Traits?							
	(iii)	What are Linked Genes ? Do they obey Law of Independent Assortment ?							
	(iv)	Why synthetic Auxins are economical than IAA ? Write Commercial uses of 2 , 4 – D.							
	(v)	Compare Somatic and Autonomic Nervous System.							
	(vi)	What are Pacinian Corpuscles ? Write their role as Receptors .							
	(vii)	Define Genomic Library . How can we search a particular Gene from a Genomic Library ?							
	(viii)	What are Plasmids ? Compare pSC 101 and p8R 322.							
	(ix)	Why patients of SCID are subjected to life threatening infections and how they can be treated via Gene Therapy?							
	(x)	Differentiate between Population and Community .							
	(xi)	How can Grazing turn a Pastureland into a Barren Area?							
	(xii)	What is meant by Denitrification?							
2.No.4	(i)	Differentiate between Growth and Development.							
	(ii)	Define Apical Dominance. How it affects the Morphology of Plants?							
	(iii)	What is Karyotype?							
	(iv)	Do you know how much information one Human Chromosome contains ? Comment.							
	(v)	What is Phosphodiester Bond ? Give its role in DNA synthesis .							
	(vi)	What is Interphase ? Give its Phases.							
	(vii)	Define and draw Mitotic Apparatus . pakeity.org							
	(viii)	Give the role of Ozone in initiation of life on Earth.							
	(ix)	Differentiate between Darwinism and Neo-Darwinism.							
		Part - II (3 x 8 = 2	4						
.No.5	(a)	What is Dialysis ? Describe its types.							
	(b)	Describe the importance of Meiosis and Mitosis.							
No.6	(a)	Define Secondary Growth . Explain .							
	(b)	Discuss Four Stages of Xerosere .							
.No.7	(a)								
.140.7	(a)	Why Feedback Mechanism is important for a human body ? Explain it with an example.							
	(b)	State Hardy – Weinberg Theorem . Discuss any two factors affecting Gene Frequency.							
No.8	(a)	Argue that Oogenesis and Spermatogenesis are fundamentally Meiotic Processes but							
		have extraordinary differences.							
	(b)								
	(b)	What is Incomplete Dominance ? Explain it with an example.							
.No.9	(b) (a) (b)

Marks:17

Time: 20 Minutes

Paper Code Objective (ii) Paper: II Note: - You have four choices for each objective type question as A, B, C and D. The choice which you think is correct; fill that circle in front of that question number in your answer book. Use marker or pen to fill the circles. Cutting or filling up two or more circles will result no mark.

Roll No.\_

#### **SECTION-A**

	SECTION-A							
Q.1	Questions	Α	В	С	D			
1.	In a nucleotide, a nitrogenous base is attached to carbon number:	5	4 •	3	1			
2.	A set of three nucleotides on mRNA specifying a particular amino acid is called:	Code	Genetic code	Codon	Anticodon			
3.	Brothers having same parents are not similar due to:	Mitosis	Synopsis	Apoptosis	Crossing over			
4.	On looking at a pure white cat, a student of genetics said, "Alas, the cat is deaf!". Guess the genotype of cat.	W/W	W/w	w/w	Both A & B			
5.	Indicate the salt tolerant plant among the given:	Acacia 👝	Mango	Arabidopsis	Shisham			
6.	In which disease a patient lacks a gene coding for trans-membrane carrier of chloride ions?	SCID	Cystic fibrosis	Cancer	Hodgkin's lymphoma			
7.	Which protein is similar in all aerobic organisms?	Cytochrome b	Haemoglobin	Cytochrome c	Both A & C			
8.	The term niche was coined by:	Joseph Grinnell	Charles Elton	Tansley	Hult			
9.	Select the inappropriate matching.	Khanpur ↔ Cholistan	Yazman ờ Thar	Mianwali ↔ Thal	Gilgit ↔ Grassland			
10.	Homo sapiens have been on the earth for about:	10,000 years	20,000 years	40,000 years	60,000 years			
11.	Which of the given retards cell elongation in plants?	Red light	Blue light	Ultraviolet rays	Both A & C			
12.	An individual produced by parthenogenesis is:	Male •	Female	Male or female	Hermaphrodite			
13.	Transient alteration in brain due to excessive rapid electrical discharges in the grey matter are diagnosed as:	Epilepsy	Parkinsonism	Alzheimer's disease	Goiter			
14.	Hormone that stimulates conversion of glucose into lipids and proteins is:	Cortisol	Insulin	Aldosterone	Glucagon			
15.	What is not true about sclerenchyma?	Lignin	Branched pits	Protoplast	Thick cell wall			
16.	Nastic movements are due to balance or ratio between:	Abscisic acid and gibberellin	Abscisic acid and cytokinin	Abscisic acid and auxins	Both A & C			
17.	Production of heat or high temperature during fever is called:	Pyrogen	Pyrexia	Antitoxin	Both A & C

H.S.S.C (12th)1stAnnual 2024 Biology Roll No. (To be written by the candidate, Paper: II Subjective Marks: 68 Time: 2:40 Hours **SECTION-B** Note:- Section B is compulsory. 2. Write short answers to any EIGHT parts.  $(8 \times 2 = 16)$ How do fresh water organisms maintain osmoregulation? i. vii. How would you differentiate between oviparous and viviparous condition? Human nephrons have association of three types of capillary ii. viii. What is the importance of pollen tube in spermatophytes? beds. Give their names and location in the kidney. Why leaves are said to be excretophores? What is profundal zone? What is its source of nutrition? iii. İX. What do you know about skeletal deformities because of Give two adaptations in plants and animals for terrestrial genetic causes? Discuss any two of them. ecosystem. How chlorine is responsible for ozone depletion? What kind of cells are responsible for bone formation? xi. Name unpaired bones of cranium. What is acid rain? Write its any two effects. xii. ٧i. Write short answers to any EIGHT parts.  $(8 \times 2 = 16)$ 3. Write names of things which are required to produce recombinant DNA. Define Biological Rhythms. Write names of its types. vii. i. What is restriction fragment length polymorphism? How is it detected? ii. Write functions of cerebellum. vili. How would you define Transgenic Organisms? How would you define innate behaviour? Give example. CIX. iii. What do you remember about law of independent assortment? How does a predator affect prey and vice versa? X. iv. xi. What does happen in denitrification? Why blood group 0 is called universal donor? ٧. How would you compare autecology and synecology? What do you understand by sex limited trait? Give example. ٧i. Write short answers to any SIX parts.  $(6 \times 2 = 12)$ 4. Define lateral meristem. Give example. vi. Define cell cycle. Give its sketch also. i. ii. How coelom is formed in chick embryo? vii. What is malignant tumour? Comparative embryology is an evidence of evolution. Justify. iii. What is nucleosome? viii. Define Hardy-Weinberg Theorem. Differentiate between leading strand and lagging strand of DNA. ix. How does phenylketonuria affect body? Note:- Attempt any THREE questions. Each question carries EIGHT (4+4=8) marks. pakcity.org § (8x3=24)SECTION-C 5. (a) How are excretory products made concentrated in the human kidney?

(b)

(b)

(b) In monohybrid cross, we get 3:1 phenotype and 1:2:1 genotype ratio. Prove it with one example.

What is succession? Explain it with an example of xerosere. Write down any four factors which may affect gene frequency.

313-424-1A-18000

(b) What is polymerase chain reaction? How does it work? Give its applications also.

(b) Write down four differences between mitosis and meiosis.

7. (a) Discuss the main events involved in initiation of nerve impulse.

8. (a) Describe the role of phytochrome in photoperiodism.

6. (a) How are broken bones repaired? Explain.

9. (a) Write a note on embryonic induction.

**MARKS: 17** 

### **OBJECTIVE**

NOTE: You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill that circle in front of that question number.

Use marker or pen to fill the circles. Cutting or filling two or more circles will result in zero marks in that question

	Use marker or pen to mire the circles. Cutting of mining two of more circles will result
OH	in zero marks in that question.  ESTION NO. 1  pakcity.org
1	Commonly used restriction enzyme is
	(A) PBR 322 (B) PSC 101 (C) Plasmid (D) ECoR1
2	Eukaryotes are thought to have first appeared about
	(A) 3.5 Billions (B) 1.5 Billions (C) 2.5 Billions (D) 4.5 Billions
3	The change in frequency of allele at locus that occur by chance is
	(A) Gene pool (B) Genome (C) Migration (D) Genetic drift
4	Pick the biotic component from the following
	(A) Animals (B) Soil (C) Water (D) Atmosphere
5	Stone monuments are being eroded due to stone cancer by
	(A) Green House effect (B) Ozone depletion (C) Acid rain (D) Global warming
6	Incidence of uric acid kidney stone is
	(A) 5 % (B) 10 % (C) 15 % (D) 70 %
7	Which is stimulus for thigmotropism
	(A) Touch (B) Light (C) Water (Chemical
8	Clavicle connects scapula with
	(A) Skull (B) Femur (C) Tibia (D) Sternum
9	Hormone which promotes bolting of some rosset plants is known as
	(A) Ethene (B) Auxin (C) Cytokinin (D) Gibberellin
10	The 2 <sup>nd</sup> largest part of brain is
	(A) Thallamus (B) Hypothalamus (C) Cerebellum (D) Cerebrum
11	In honey bee, males are haploid and produce sperms by
	(A) Mitosis (B) Meiosis (C) Binary fission (D) Multiple fission
12	Cleavage results in the formation of founded closely packed mass blastomeres
	(A) Gastrula (B) Blastula (C) Morulla ● (D) Neurula
13	How many different kinds of t.RNA in human cell
	(A) 54 (B) 45 (C) 25 (D) 20
14	The sequence of nucleotide that determine the amino acid sequence of a protein is
	(A) Gene (B) Allele (C) Multiple allele (D) Chromosome
15	Full cell cycle in yeast cell has length
	(A) 30 minutes (B) 60 minutes (C) 90 minutes ● (D) 120 minutes
16	A pure breeding tall pea plant was crossed to short plant. What will be the frequency of
	short plants in F1
	(A) 0.25 (B) 0 (C) 0.5 (D) 1
17	Antibody made by soyabeen can be used as treatment for
	(A) Genital Herpes (B) AIDS (C) Hepatitis (D) Herpes simplex

QUESTION NO. 2 Write short answers any Eight (8) of the following DG Khan Board-2024 GG-2 Describe some adaptations made by plants living in extreme dry conditions How kidney helps to conserve water when body is facing dehydration? ii What are heterotherms? Give two examples iii pakcity.org Why ecdysis is necessary for most insects? iv Describe the role of Ca<sup>+2</sup> and ATP in muscle contraction v How snakes move from one place to another without legs? vi Compare parthenocarpy with apomixes vii What is oestrous cycle? Is it also present in humans? viii What do you mean by "Taiga"? Give its conditions ix What are the main factors that determine productivity of an ecosystem? X How global worming may effect human life on earth? xi xii Differentiate between renewable and non-renewable resources QUESTION NO. 3 Write short answers any Eight (8) of the following 16 How are synthetic auxins applied in agriculture? ii How does sodium potassium pump work in transmission of nerve impulse? Why insight learning is considered highest form of learning? iii What do you know about nullogamete? iv Why AB blood group is known as universal recipient? V A man is 45 years old and bald. His wife also has pattern baldness. What is the risk that vi their son will lose his hair? How do we obtain gene of interest? vii SHEEN TO LES What is gene pharming? viii What do you know about Taq polymerase? ix Define commensalism. Give example X хi What do you know about Autecology? xii Define Food Chain. Give an example QUESTION NO. 4 Write short answers any Six (6) of the following 12 Narrate the characteristics of dividing cells in plants i Give the effects of temperature on growth of plants ii iii Draw a structure showing phosphodiester linkage A human chromosome has a bulk of information. How? iv How euchromatin and heterochromatin are different? v What is the role of Actin and myosin in cell division? vi Write the characteristics of cancer cells vii Give the contribution of Lamarck in evolution viii ix Define gene pool and fixed allele **SECTION-II** Note: Attempt any Three questions from this section  $8 \times 3 = 24$ Q.5.(A)Describe the major homeostatic functions of the liver Define mitosis. Write its importance (B) Q.6.(A)Describe vertebral column and rib cage Explain Nitrogen cycle with the help of sketch (B) Write a note on structure and function of fore brain Q.7.(A)The fossil record and comparative embryology are strong evidence of evolution. Justify What is incomplete dominance? Explain with the example of 4 O'clock plant Q.8.(A) Elaborate various components of female reproductive system (B) What is regeneration? Why it is more common in some animals and not in others? Q.9.(A)What is gene therapy? Discuss its importance with two examples (B)

	(A) Progesteron (B) Oxytocin (C) Testosteron (D) Luteonizing hormone
11	Eggs with diploid number of chromosomes are produced as a result of
	(A) Normal mitosis (B) Normal meiosis (C) Modified mitosis (D) Modified meiosis
12	Apical dominance is caused by
	(A) Auxin (B) Cytokinin (C) Gibberellin (D) Ethene
13	Complete set of chromosomes in an organism is called
	(A) Genome (B) Genotype (C) Phenotype (D) Karyotype
14	In a nucleotide, Nitrogen base is attached to carbon number of pentose sugar
	(A) $1 \bullet$ (B) 2 (C) 3/ (D) 4
15	An example of cell that enters G0 – phase permanently during cell cycle is
	(A) Gland cell (B) Skin cell (C) Nerve cell (D) Bone cell
16	Gene I for blood group is found on chromosome number
	(A) 6 (B) 7 (C) 8 (D) 9 •
17	An example of restriction endonuclease is
	(A) Taq polymerase (B) ECoR1 ● (C) Gyrase (D) Ligase

20 (Obj) - 1<sup>st</sup> Annual 2024

SEQUENCE - 4 (PAPER CODE - 8467)

# Objective Paper Code

# Faisalabad Board-2024-G-1

Intermediate Part Second

BIOLOGY (Objective)

**GROUP - I** 

Time: 20 Minutes

Marks: 17

Roll No: -

8465 You have four choices for each objective type question as A, B, C and D. The choice which you think is correct, fill the relevant circle in front of that question number on computerized answer sheet. Use marker or pen to fill the circles. Cutting or filling two or more circles will result in zero marks in that question. Attempt as many questions as given in objective type question paper and leave other circles blank.

	objective type question paper and leave other circles	UIAIIN.			
5.11	Questions	A	В	C	D
1	Sickle cell anemia is caused when glutamic acid is replaced in bemoglobin by:	Glycine	Valine •	Alanine	Arginine
2	The transfer of information from RNA to ribosomes for synthesis of polypeptide is called:	Transduction	Transcription	Translation	Replication
3	Plant tissue becomes pitted during:	Cell division	Maturation	Differentiation	Both "B" and "C"
4	When a female cat shows desire for mating, she is said to be on:	Menstrual cycle	Growth period	Heat •	Both "A" and "B"
5	Mechanoreceptors are not present in:	Stomach	Ear	Carotid arteries	Muscles
ò	A bundle of axons and dendrites bounded by connective tissue is called:	Neuron 🔵	Nerve	Grey matter	White matter
7	What is not true about skeletal muscle fibers?	10-100 μm dia	Store <b>o</b> glycogen	Store myoglobin	10–100 nm dia
8	Nastic movements are due to the balance between:	Abscisic acid	Abscisic acid and auxins	Abscisic acid and cytokinins	Gibberellins and auxins
4	The elimination of nitrogenous wastes from body is known as:	Defecation	Excretion	Secretion	Both "B" and "C"
ιĐ	Which one is a nutritional disorder?	Kwashiorkor	AIDS	Alzheimer	Osteoarthritis
11	Productivity of an ecosystem is indicated by:	Consumption of CO <sub>2</sub>	Evolution of O <sub>2</sub>	Number of plants	Both "A" and "B"
12	Which is a biotic factor?	Air	Water	Soil	Plants
13	Stamens of flowers evolved from:	Sepals	Petals •	Leaves	Stem
14	What is not true about gel electrophoresis?	Used for carbohydrate test	Used for DNA fragments separation	Used for separation of nucleotides	Both "B" and "C"
15	PBR <sup>322</sup> has antibodies resistance gene for:	Tetracycline	Streptomycin		· Both "A" and "C"
10	How many gene pairs contribute to wheat grain colour?	1	2	3 •	4
1	Sisters having same parents are not similar due to:	Mitosis	Synapsis	Apoptosis	Crossing over

GROUP - I

**pakcity.org** 

Time: 02:40 Hours

Marks: 68

### SECTION - I

2. Write short answers to any EIGIIT parts.

How is hypertonic urine formed during the state of dehydration?

Name the plasma proteins synthesized by liver. Also write their function. (iii) How would you differentiate between peritoneal and hemodialysis?

(iv) What is antagonistic action of muscles?

Why does moulting takes place in arthropods? (v)

(vi) How disc-ship is treated?

(vii) Which disease is caused by treponema pallidum? Give its symptoms.

(viii) How does ovulation occur in female reproductive cycle?

(ix) How plants and animals cope with the challenge of force of gravity on land?

(x)What type of organisms are present in limnetic zone of a lake ecosystem?

(xi) How is ozone layer being depleted?

(xii) Differentiate between deforestation and afforestation.

3. Write short answers to any EIGHT parts.

Classify hormones on the basis of chemical composition.

(ii) Compare relative abundance of different type of receptors in our body.

(iii) Define habituation with example.

(iv) How genetics of blood groups help in solving cases of disputed parentage?

How blood groups are categorized as +ive or -ive? (v)

(vi) Why pattern of Y-linked inheritance is very peculiar?

(vii) How can you describe plasmid?

(viii) Write any two principles of gene sequencing.

(ix) How hypercholesterolemia is cured with gene therapy?

(x) How would you define synecology? Give an example

Write role of root nodules in plants. (xi)

(xii) What do you understand by ammonification?

4. Write short answers to any SIX parts.

How temperature affects growth of plants? (i) Differentiate between morula and gastrula stage of chick embryo. (ii)

(iii) Differentiate between sub meta centric and telocentric chromosomes.

(iv) What is minimal medium for the growth of neurospora? ...

Define point mutation. Give example. (v)

(vi) How cytokinesis occurs in animal cell?

(vii) What is bivalent or tetrad?

(viii) Give examples Lamarck cited in favour of his theory of evolution.

(ix) Define population and gene pool.

# CECTION

	SECTION - II	Attempt any Trif	CEE questions.	Each question	carries us marks
5. (a)Di	scuss osmoregulation in an	imals of marine env	rironment.		

(b) What is interphase? Explain its various phases.

6. (a) Define joint. Also give various types of joints. (b) Explain symbiosis with examples. How it is different from mutualism?

7. (a) Compare nervous system of hydra with that of planaria. 04

(b) Explain endosymbiont hypothesis for origin of eukaryotic cell.

8. (a) What structures are associated with male reproductive system? What are their functions? 04 (b) What is incomplete dominance? Explain the phenomenon of incomplete dominance with

one example.

9. (a) Discuss the role of nucleus in development with the help of an experiment on alga. 04 04

(b) What is gene therapy? Describe two main types of gene therapy with one example of each.

BIOL	LOGY PAPER-II GROUP-II	
IMI	E ALLOWED: 2.40 Hours SUBJECTIVE MAXIMUM MA	RKS: 68
OTI	E: Write same question number and its parts number on answer book, as given in the quest	ion paper.
	SECTION-I	
	tempt any eight parts.	$8 \times 2 = 1$
(i)	How does aldosterone play its role in concentration of urine?	
(ii)	What is special or unique feature of Malpighian tubules in insects?	
(iii)	Why does temperature of body increase during fever?	
(iv)	What is "All or None" response in muscle contraction?	
(v)	How does exercise affect a muscle?	
(vi)	How is pulvinus involved in sleep movements?	
(vii)	How are identical twins produced?	
(viii)	What do you know about the term oviparity?	
(ix)	Write down any two properties of hydrospheric ecosystem.	
(x)	Differentiate between Prairies and Savanna grasslands.	
(xi)	How are solid wastes useful in overcoming energy crisis?	
(xii)	Mention causes of Beriberi and Haemophilia.	8 × 2 = 16
$\frac{\text{3. At}}{\text{(i)}}$	Define Habituation. Give two examples.	0 1 2 - 10
(ii)	Write the role of a hormone in regulation of bile and pancreatic juice secretion.	
(iii)	Give the functions of sympathetic nervous system.	
(iv)	What are compound sex chromosomes? Write one example.	
(v)	Differentiate the sex-determination pattern in humans and birds.	
(vi)	What are Pseudoautosomal genes? Give one example.	
(vii)	What are Transgenic bacteria? Give their role in cleaning up beaches.	
(viii)	How Transgenic bacteria are better than Transgenic animals?	
(ix)	What is meristem culture? Write its one advantage	
(x)	Draw a flow sheet of an energy pyramid showing transfer of energy from producers to tertiary co	
		msumers.
(xi)	Differentiate between Primary and Secondary Succession.	onsumers.
	Differentiate between Primary and Secondary Succession.  Define the terms habitat and niche.	
(xii) 4. At	Define the terms habitat and niche.  tempt any six parts.	$6 \times 2 = 12$
(xii) 4. At (i)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.	
(xii) 4. At (i) (ii)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?	
(xii) 4. At (i) (ii) (iii)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discordal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.	
(xii) 4. At (i) (ii) (iii) (iv)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?	
(xii) 4. At (i) (ii) (iii) (iv) (v)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.	
(xii) 4. At (i) (ii) (iii) (iv) (v) (vi)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.  Why interphase is called resting phase?	
(xii) 4. At (i) (ii) (iii) (iv) (v) (vi) (vii)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.  Why interphase is called resting phase?  How is Phragmoplast formed? Give its importance for future daughter cells.	
(xii) 4. At (i) (ii) (iii) (iv) (v) (vi) (vii) (viii)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discoidal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.  Why interphase is called resting phase?  How is Phragmoplast formed? Give its importance for future daughter cells.  What are Hydrothermal vents?	
(xii) 4. At (i) (ii) (iii) (iv) (v) (vi) (vii)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discordal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.  Why interphase is called resting phase?  How is Phragmoplast formed? Give its importance for future daughter cells.  What are Hydrothermal vents?  Differentiate between Divergent and Convergent evolution.	
(xii) 4. At (i) (ii) (iii) (iv) (v) (vi) (vii) (viii) (ix)	Define the terms habitat and niche.  tempt any six parts.  Highlight the role of morphogenetic determinants during development of an individual.  What do you know about discordal cleavage?  "Genetic code is universal but not quite universal". Justify this statement.  How is lagging strand synthesized in the replication process?  What is point mutation? Give one example.  Why interphase is called resting phase?  How is Phragmoplast formed? Give its importance for future daughter cells.  What are Hydrothermal vents?  Differentiate between Divergent and Convergent evolution.  SECTION-II	6 × 2 = 12

	SECTION-I	0016
2. At	tempt any eight parts.	8 × 2 = 16
(i)	How metanephridium is better than protonephridium?	1+1
(ii)	Categorise the plants distribution on the basis of osmoregulation.	2
(iii)	How can you describe blubber?	2
(iv)	Compare Epinasty with Hyponasty?	1+1
(v)	How would you define sliding filament model?	2
(vi)	How does jet propulsion mechanism work?	2
(vii)	What are advantages of Sexual Reproduction?	1+1
(viii)	How menstrual cycle is defined?	2
(ix)	Mention role of light in Limnetic zone.	2
(x)	Compare Coniferous alpine and Boreal forests.	1+1
(xi)	Define Greenhouse effect.	2
(xii)	Write any two sources of water pollution.	2
. At	tempt any eight parts.	$8 \times 2 = 16$
(i)	What are the elements of nervous system?	
(ii)	Which factors control secretion of Antidiuretic hormone or Vasopressin?	
(iii)	Define Habituation. Give example.	
(iv)	Differentiate between Homozygote and Heterozygote.	
(v)	What are multiple Alleles? Give example.	
(vi)	How does sex determination occur in birds?	
vii)	How can gene of interest be obtained?	
viii)	What are the applications of PCR amplification and analysis?	
(ix)	Mention forensic application of DNA analysis.	
(x)	What is Biosphere?	
(xi)	Define Food web. Give its importance.	
(xii)	Write a note on Limnetic zone.	
	tempt any six parts.	$6 \times 2 = 12$
(i)	How do environmental factors contribute to abnormal development?	
(ii)	Why growth pattern in plants is called an open growth?	
(iii)	What are Fixed alleles?	
	How can you differentiate between Homologous and Analogous organs?	
(v)	Why do DNA replication always proceeds $5' \rightarrow 3'$ directions?	
(vi)	What is a Point Mutation? Give one example. pakeity.org	
vii)	How do different chromosomes differ from each other?	
viii)	How are cancerous cells distinguished from normal cells?	
(ix)	Is interphase a resting phase? Why?	
17	SECTION-II	
OTE	: Attempt any three questions.	$3 \times 8 = 24$
	Explain different methods of excretion in plants.	4
.(a) (b)	What is Meiosis? Discuss prophase-I of meiosis in detail.	4
(a) (b)	Define Joints. How they are classified? Explain.  Define Succession? Explain Xerosere in detail.	4
(a)	What is Synapse? How impulse can pass through synapse? Discuss it with suitable d	liagram. 4
(b)	Define Endangered species. Explain three measures to save endangered species.	4
.(a)	What are autosomes and sex-chromosomes? Explain sex-determination in humans.	4
(b)	Discuss the role of phytochromes in photoperiodism.	4
		4
.(a)	Explain embryonic induction in detail.	4
(b)	What are transgenic bacteria? Write down their practical use in various fields.  27-2024(1st-	
	27-2024(1	, 10000 (1120221111)

# **Biology (Objective)**

Marks: 17 **Time:20 Minutes** Write answers to the questions on the objective answer sheet provided. Four possible answers are given. Which answer you consider correct fill the corresponding circle A,B,C or D in front of each question with marker or ink on the answer sheet provided. 1.1 The excretory product that requires minimum water for its elimination as compared to others is: (D) Creatinin Uric acid (B) Ammonia (A) Urea 2. Which of the following is bone of axial skeleton: (D) Femur Pelvis Shoulder girdle (B) (A) Ribs 3. Cardiac muscles are: None of these (D) Both (A) and (B) (B) Involuntary (A) Voluntary 4. Which one is not related to others is: (D) Diabetes mellitus (C) Exophthalmic goiter (A) Cretinism (B) Myxoedema 5. Gastrin is the hormone produced by: Oral cavity (D) Pancreas (B) Liver (A) Gut 6. Reproduction is very important for the survival of: Both (A) and (B) Individual (C) (B) Population (A) Species For maximum growth of plants, the optimum temperature is: 30 - 35 °C (B) 20 - 25 °C (A) 15 - 20 °C 8. Enzyme are responsible for assembly of: All (A),(B) and (C) Carbohydrate (B) Protein (A) Nucleic acid 9. In Bacteria, the newly synthesized mRNA is released in: Chloroplast (D) Mitochondria ... Nucleus (A) Cytoplasm 10. In Klinefelter's syndrome: Additional sex-chromosome is present (B) One x. chromosome is missing (A) None of these (D) One autosome is missing (C) 11. When a haemophilic carrier women marries a normal man, who among her offspring may be affected: (C) Half of her daughters (D) Half of her sons (B) All her daughters (A) All her children 12. A team of Japanese scientists is attempting to introduce the C<sub>4</sub> photosynthetic cycle into: (Č) (D) Oat Corn (B) Wheat (A) Rice 13. It makes bacterial cell more permeable to take up recombinant plasmid: (C) Calcium chloride (D) Cesium chloride (A) Sodium chloride (B) Potassium chloride 14. Who published an essay on "The principle of population"? (D) Mendel (C) Malthus (B) Lyell (A) Darwin 15. Bacteria and Fungi are examples of: Grazer (C) Consumer (A) Decomposer (B) Producer The light in which zone is insufficient to support photosynthesis: All of these Profundal (B) Limnetic (A) Littoral 17. Total area of world under cultivation is: (D) 12 % 11 % (C) (B) 10 % (A) 9% 621-12-A

Rawalpindi Board-2024-G-1 H.S.S.C. (Part-II) A / 2024 Roll No (For All Sessions) **Biology (Subjective)** Group - I Marks: 68 Time: 2:40 Hours Section - I [2x8=16] 2. Write short answers of any eight parts of the question. Why color of plant leaves turns yellow in autumn? How plants protect their enzyme from denaturation at high temperature? (ii) (iii) Compare hydrophytes with xerophytes. (iv) Out of 12 pairs of ribs, why only two pairs of ribs are called free floating ribs? Describe internal structure of cilium. (v) How low Ca<sup>+2</sup> in blood affects bones in growing children? (vi) Differentiate between chemotactic and chemotropic movements. (vii) (viii) Name the cells found outside seminiferous tubules. Give one main function of those cells. (ix) Why is there no productivity in profundal zone in aquatic ecosystem? What is Tundra? Does this ecosystem exist in Pakistan? (x)How combusion of fossil fuels is related to stone cancer? (xi) Write down the two impacts of ozone layer depletion on human life (xii) [2x8=16] Write short answers of any eight parts of the question. How do plants respond to various stimuli under stress? Define Threshold frequency to initiate nerve impulse. (ii) What do you know about commercial applications of Gibberellins? (at least two). (iii) (iv) Why is blood group "O" considered universal donor? What do you know about XX - XY mechanism of sex determination? (v) (vi) Define product rule. Give an example. How cancer patients are being treated by gene therapy? (vii) Give two practical uses of DNA finger printing technology. (viii) What are restriction endonucleases? Give example. (ix) (x)How does length of food chain affect an ecosystem? (xi) What is pyramid of energy? Define Autecology. Give example, (xii) [2x6=12]Write short answers of any six parts of the question The plant cell size increase in number of cells and flowering are affected by light. How? Differentiate between Gastrula and Neurula. Compare the homologous and analogous organs. (iii) How a particular amino acid is brought at a specific ribosomal site? Give the role of enzyme also. (iv) What is point mutation? Write one example. (v) Draw the structural formulae of Adenine and Guanine. (vi)

pakcity.

(vii)

(viii)

(ix)

Why Anaphase is considered critical phase?

How cancer cells are different from normal cells?

Write any two points of Lamarckism.

		Section - II				
Note:		Attempt any three questions from the following:				
5.	(a)	What is Renal failure? Describe its treatment.	[4]			
	(b)	How does cytokinesis occur in animal cells? In which way does it differ from that in plant cell?	[4]			
6.	(a)	Discuss genetic and hormonal causes about deformities of skeleton.	[2+2]			
1.77 S	(b)	Explain Nitrogen cycle with the help of its sketch?	[4]			
7.	(a)	Which factors are involved in establishment of resting membrane potential? Explain.	[4]			
	(b)	Define Hardy-Weinberg Theorem. How its equation in used to calculate allele & genotype frequency?	[4]			
8.	(a)	Discuss sex determining pattern in grass hopper and birds.	[4]			
	(b)	Describe female reproductive cycle in human.	[4]			
9.	(a)	What is growth? Discuss its phases in plants.	[4]			
	(b)	Write a note on transgenic animals.	[4]			
	. /	622-12-A

(i) Write structural formula of Urea and Uric Acid. (iii) Is liver a major homeostatic organ? Justify in few lines. (ii) Why calcium ions are basic requirment for muscle contraction? (iv) How is turgor pressure built in a plant cell? (v) What do you understand by antagonistic arrangement of muscles? Give example. pakcity.org (vi) How is reproduction significant for the survival of a species? (vii) Suggest a remedy for the parents which are unable to enjoy normal process of fertilization and birth. (viii) What do you understand by the productivity of an aquatic ecosystem? (ix) What was the reason of desertification in Sahel at southren edge of Sahara desert? (x) How can we minimize the effects of energy shortage? (xi) What do you understand by the term "Global warming"? (xii) Answer briefly any Eight parts from the followings:-3.  $8 \times 2 = 16$ Describe the structure of spinal cord. (ii) Differentiate between somatic and autonomic nervous system. (i) Give some differences between etiolation chlorosis. (iii) What happens when a human is given wrong blood transfusion? (iv) What pattern of sex-determination is found in grasshopper? Elaborate. (v) Describe sexual dimorphism in drosophila. (vii) Is it possible to extract metals from low graded ores using (vi) Biotecnology? How? How a suspected rapist can be identified? (ix) What are molecular scissors? Give examples (viii) What is commensalism? Give example. (xi) What is denitrification? Write its impact. (x) Differentiate between habitat and niche. (xii) Answer briefly any Six parts from the followings: 4.  $6 \times 2 = 12$ How is a blastula formed in a developing chick embryo? (i) Define Teratology. Enlist any two causes of abnormal development. (ii) What will happen to replication of DNA, if primase is not present. (iii) Where codon and anticodon are situated. (v) How is translation terminated? (iv) How do Karyokinesis and cytokinesis phases of cell division differ? (vi) Enlist four important functions of Mitosis. (viii) What is genetic drift? How does it affects gene frequency? (vii) How artificial selection is different from natural selection. (ix) Section ----- II Note: Attempt any three questions.  $(8 \times 3 = 24)$ 5. (a) What are Nephrons? Explain with the help of labelled diagram? (b) Explain various stages of Prophase I. 6. (a) Define tropic movements. Explain its different types. (b) How energy flows in Food Chain of an ecosystem. 7. (a) What is feed back mechanism? Explain with the help of an example. (b) Define and explain Hardy Weinberg theorem. 8. (a) Explain in detail the process of birth in human female. (b) What are sex-chromosomes? Discuss the chromosomal patterns of sex determination in 9. (a) Define meristems? Discuss their various types?

(b) What is gene therapy, Give its types and Explain in which disease ex-vivo-gene therapy is

Warning:- Please, do not write anything on this question paper except your Roll No. 1224(Inter Part-II) (Session 2020-22 to 2022-24) (Group 2nd) Biology (Subjective) Paper (II) Time Allowed: 2.40 hours Maximum Marks: 68 Section ----- I 2. Answer briefly any Eight parts from the followings:- $8 \times 2 = 16$ How plants of cold regions repond to freezing temperatures?(ii) What is shivering thermogenesis? (i) Differentiate vasodilation from vasoconstriction. (iv) What are unguligrade animals? (iii) How locomotion occurs in snail? (v) (vi) Define muscle fatigue. (vii) Give importance of seed dormancy. (viii) What are viviparous mammals? Give one example. What are acid rains? Give two disadvantages of acid rains. (x) What is algal bloom? (ix) Write down the importance of grassland ecosystem. (xi) (xii) Where Tundra ecosystem exists in Pakistan? Answer briefly any Eight parts from the followings:-3.  $8 \times 2 = 16$ Differentiate between etiolation and chlorosis? (i) Write the distribution of pain and cold receptors on animal body? (ii) Give the two commercial uses of Gibberellins? (iv) What is test cross? Also write its significance? (iii) Define pleiotropy? Give its two examples? (vi) Differentiate between gene linkage and linkage group? (v) Write two uses of PCR amplification and Ananlysis? (vii) What are restriction endonucleases? Give their function? (viii) Give the biotechnological uses of bacteria in mining? (x) Define climax community with example? (ix) Differentiate between ectoparasite and endoparasite. (xii) Discuss the role of decomposers in ecosystem? (xi) 4. Answer briefly any Six parts from the followings:- $6 \times 2 = 12$ (i) Define growth and embryonic development. (ii) Write the role of clear and yellow cytoplasm in development. What are okazaki fragments? In which strand they are formed? (iii) (iv) Name the single ring nitrogen bases, also drawoit. Name transforming principle, also define term transformation. (v) Name Trisomic Sexual non-disjunction in your Text book, Give two symptoms. (vi) Why and how chromosome number is halved by Meiosis. (viii) What are Analogous organs, Give one example? (vii) Write two preventive measures to save endangered species. (ix) Section ----- II Note: Attempt any three questions.  $(8 \times 3 = 24)$ 5.(a) Describe the structure of nephron with labeled diagram. (b) Write a detailed note on cancer. 6.(a) How does healing process proceed when a bone is broken in an accident? (b) Define succession. Explain all stages of Xerosere. 7.(a) Explain factors which affect gene frequency. (b) Describe the endocrine and neural functions of hypothalamus. (two each) 8.(a) What structure are associated with human female reproductive system. Also write their function. (b) State Law of Segregation prove it with one suitable example. 9.(a) How would you describe the process of growth correlations in plants? (b) What is the methodology used for expression of Recombinant DNA? 1240 -- 1224 -- 7500
